GLOWUP

Beauty and Skincare Company

Campaign Performance & ROI Optimization Case Study

A Comprehensive Data Analysis Project
For Junior Data Analysts

Prepared by: Junior Data Analyst Team
Department: Business Intelligence & Analytics

Period Covered: March 2025 – February 2026
Report Date: June 2026

1. Executive Summary

GlowUp is a fast-growing beauty and skincare startup that has invested heavily in Social Media, Influencer Marketing, Email Marketing, and Event-Based campaigns over the last 12 months.

This case study documents the full analytical journey undertaken by the data analytics team: from raw data to actionable recommendations. The study addresses four strategic business questions management has prioritized:

- Identifying which campaigns generated the highest return on investment (ROI)
- Understand which channels drove the most conversions and revenue
- Evaluating performance of campaign based on duration
- Understand how future marketing budgets should be allocated

The analysis was conducted using Power BI and included campaign performance, engagement metrics, conversion efficiency, campaign duration analysis, and channel-level profitability.

Key Findings at a Glance

- Total Marketing Spend exceeded ₹10.34 Million.
- Total Revenue Generated exceeded ₹25 Million.
- Portfolio ROI reached 141.82%, indicating strong overall profitability.
- Event campaigns delivered the highest average ROI (~165%).
- Influencer campaigns generated the highest total conversions and revenue.
- Medium-duration campaigns (8–15 days) achieved the strongest ROI performance.
- Social Media campaigns generated the highest engagement levels but not the highest profitability.
- Campaign performance varied significantly, with ROI ranging from approximately -98% to over 9800%, highlighting both high-performing and underperforming campaigns.

The report concludes with actionable recommendations on channel optimization, campaign duration strategy, seasonal planning, and budget allocation.

2. Business Scenario & Background

2.1 Company Profile

Parameter	Details
Company Name	GlowUp
Type	Startup
Industry	Beauty & Skincare
Campaign Channels	Social Media, Influencer, Email, Events
Target Audience	Urban consumers, 18–45 years
Analysis Period	March 2025 – February 2026
Currency	Indian Rupee (INR)

2.2 Problem Statement

GlowUp invested significant marketing resources across multiple channels but lacked visibility into:

- Campaign profitability
- Conversion effectiveness
- Channel performance
- Duration impact on campaign outcomes
- Seasonal marketing opportunities

Management requires data-driven recommendations for future budget allocation and campaign planning.

3. Key Performance Indicators (KPIs)

The following KPIs were selected to directly map to the business objectives. Each KPI has a defined formula and a target benchmark established by management.

KPI	Formula	Business Purpose
Campaign Spend	Sum(Spend)	Budget utilization
Revenue Generated	Sum(Revenue)	Revenue impact
ROI (%)	(Revenue – Spend)/Spend ×100	Profitability
Leads Generated	Sum(Leads)	Demand generation
Conversions	Sum(Conversions)	Customer acquisition
CPA	Spend / Conversions	Cost efficiency
Clicks	Sum(Clicks)	Engagement
Impressions	Sum(Impressions)	Reach
CTR	(Clicks / Impressions) ×100	Engagement efficiency

4. Dataset Overview

4.1 Dataset Specification

The dataset `glowup_campaigns.csv` was generated to simulate one year of transactional marketing data across all campaign channels. It contains approximately 1,000 rows of records at the individual campaign level.

Column Name	Descriptions & Notes
CampaignID	Unique identifier for each campaign (e.g., CMP0001)
CampaignName	The descriptive name of the campaign (e.g., Aura Boost, Fresh Offer)
StartDate	Campaign launch date in YYYY-MM-DD format (March 2025 - February 2026)
EndDate	Campaign wrap-up date in YYYY-MM-DD format (March 2025 - February 2026)
Channel	The marketing channel utilized (Social Media, Influencer, Email, Event)
Spend	Total budget allocated and spent on running the campaign (INR)
LeadsGenerated	Number of potential leads/customer sign-ups captured during the campaign
Conversions	Total number of completed conversions/acquisitions (direct sales)
RevenueGenerated	Total sales revenue driven directly by the campaign (INR)
Clicks	Total user clicks on digital campaign assets
Impressions	Total digital ad views/impressions

4.2 Data Quality Assessment

The dataset was reviewed for completeness, consistency, and accuracy before analysis.

Observations:

- No missing values were identified in any of the columns.

- Campaign spend, revenue, leads, and conversion data were complete and suitable for analysis.
- Date fields were validated and used to derive campaign duration.
- Extreme ROI values were retained because they represent campaign performance variability and were considered valid observations within the dataset.

5. Business Questions & Analytical Approach

Q1. Which campaigns delivered the highest ROI?

Approach:

- Calculate ROI for each campaign using the formula **(Revenue – Spend) ÷ Spend × 100**.
- Rank campaigns in descending order of ROI to identify the Top 10 and Bottom 10 performing campaigns.
- Compare campaign profitability against the overall portfolio average to identify successful marketing strategies and underperforming campaigns.
- Analyze common characteristics of high-performing campaigns for future replication.

Key Finding:

Bliss Push (333.26%), Pure Offer (324.16%), and Glow Drive (313.27%) delivered the highest ROI, significantly outperforming the overall portfolio ROI of 141.82%. These campaigns represent best practices for future campaign planning and optimization.

Q2: Which marketing channels (Social Media, Influencer, Email, and Event) are most effective in terms of conversions and Cost per Acquisition (CPA)?

Approach:

- Aggregate Spend, Revenue, Conversions, ROI, and CPA for each marketing channel.
- Compare channel performance using KPI cards and channel-wise visualizations.
- Evaluate which channel delivers the highest customer acquisition volume while maintaining the lowest acquisition cost.
- Assess overall marketing efficiency by comparing profitability alongside conversion performance.

Key Finding:

Influencer campaigns generated the highest conversions (58,571 customers), while Event campaigns achieved the lowest CPA (₹46.39) and highest ROI (164.87%), making them the most cost-effective and profitable marketing channel.

Q3. Are there campaigns that generated high leads but low conversions? If so, why?

Approach:

- Compare Leads Generated with Conversions at the campaign level.
- Identify campaigns with high lead volume but comparatively low conversion rates.
- Calculate Lead-to-Conversion Rate to evaluate campaign effectiveness.
- Investigate potential causes such as audience targeting, campaign messaging, landing page effectiveness, campaign duration, and channel selection.

Key Finding:

Yes. Several campaigns generated high lead volumes but comparatively lower conversions, indicating inefficiencies in the marketing funnel. This suggests opportunities to improve audience targeting, campaign messaging, landing page experience, and post-click conversion strategies.

Q4. How should the next quarter's marketing budget be allocated based on past performance?

Approach:

- Evaluate historical ROI, CPA, Revenue, and Conversion performance across all marketing channels.
- Compare campaign performance by duration category and campaign month.
- Identify channels and campaign strategies that consistently generate superior financial returns.
- Recommend an optimized budget allocation framework that balances profitability, customer acquisition, and long-term growth.

Key Finding:

The recommended allocation is **35% to Influencer, 30% to Event, 20% to Social Media, and 15% to Email.** This distribution balances customer acquisition, profitability, brand awareness, and long-term growth based on historical campaign performance.

Q5. What strategies (e.g., channel focus, timing, audience targeting) can Improve ROI across future marketing campaigns?

Approach:

- Analyze campaign performance across channels, duration categories, and seasonal periods.
- Identify opportunities to improve conversion efficiency, audience targeting, and campaign timing.
- Evaluate engagement metrics (Clicks, Impressions, and CTR) to understand their relationship with revenue generation.
- Develop actionable recommendations focusing on channel optimization, campaign duration, seasonal marketing, and replication of high-performing campaign strategies.

Key Finding:

ROI can be improved by prioritizing Event and Influencer campaigns, adopting 8–15 day campaign durations, increasing investment during wedding and festive seasons, optimizing Social Media conversion funnels, and replicating the targeting and creative strategies of the highest-performing campaigns.

6. Exploratory Data Analysis (EDA) Guidance

6.1 Summary Statistics to Report

Metric	Value
Total Campaigns	1,000
Analysis Period	Mar 2025 – Feb 2026
Marketing Channels	4 Channels (Social Media, Influencer, Email, Events)
Total Spend	₹10.34M
Total Revenue	₹25.01M
Portfolio ROI	141.82%
Total Leads	994K
Total Conversions	208K
Total Clicks	5.11M
Total Impressions	54.72M

6.2 Recommended Visualizations

Visualization (Chart Title in Dashboard)	What it Answers
Bar Chart: ROI % by Marketing Channel	Which channels generate the highest profit margins?
Scatter Plot Channel Performance Analysis: Revenue vs. Spend by Conversion Volume	How efficiently does ad spend scale to drive top-line revenue?

Clustered Column and Line: Conversions vs Cost per Acquisition (CPA) by Channel	Which channel delivers volume cost-effectively?
Line and Clustered Column: ROI & Revenue Trend Over Time	Are there seasonal performance peaks or trends in profitability?
Bar Chart: Top Campaigns by ROI	Which strategies and concepts should be replicated?
Bar Chart: Bottom Campaigns by ROI	Which campaigns require optimization or shutdown?
Clustered Column and Line: Impressions, Clicks, and CTR by Channel	Which channels drive the strongest organic or paid brand visibility?
Line and Stacked Column: Spend, Revenue, and ROI across Campaign Lifespans	How does campaign duration impact overall profitability and volume?

6.3 Data Cleaning Steps

1. Imported glowup_campaigns.csv.
2. Validated data types for date and numeric columns.
3. Created Campaign Duration using Start Date and End Date.
4. Created ROI, CPA, and CTR measures.
5. Handled missing Click and Impression values using documented assumptions.
6. Verified Spend, Revenue, and Conversion values for logical consistency.

7. Expected Insights & Hidden Patterns

7.1 Channel Performance Insights

Marketing Channel Effectiveness

- Event campaigns deliver the highest ROI (164.87%) and lowest CPA (₹46.39), making them GlowUp's most profitable marketing channel.
- Influencer campaigns generate the highest conversion volume (58.6K), establishing them as the primary customer acquisition and revenue-driving channel.
- Social Media campaigns achieve the highest CTR (9.68%) but not the highest ROI, indicating that strong engagement does not always translate into maximum profitability.

7.2 Campaign Duration & Efficiency Insights

Campaign Performance by Duration

- Medium-duration campaigns (8–15 days) achieve the highest ROI (163.6%), demonstrating the most effective balance between audience reach and budget efficiency.
- Long-duration campaigns generate the highest total revenue (₹14.7M) but require substantially higher investment, reducing overall efficiency.
- Campaign performance shows diminishing returns beyond the medium-duration range, suggesting that extending campaign lifespans does not proportionally increase profitability.

7.3 Seasonality & Business Growth Insights

Demand Pattern & Strategic Opportunities

- April–June campaigns show stronger performance — likely influenced by summer skincare demand and wedding-season purchases.
- August–November represents the highest revenue opportunity period — aligned with Raksha Bandhan, Navratri, Dussehra, and Diwali.
- December–January maintains elevated performance levels — supported by Christmas, New Year, and wedding-season demand.
- The overall marketing portfolio achieved a strong ROI of 141.82%, generating ₹25.01M revenue from ₹10.34M spend, confirming that marketing investments are creating significant business value.
- Profitability is concentrated within Event and Influencer channels — suggesting future budget prioritization opportunities.
- Significant ROI variation exists across campaigns — highlighting the importance of campaign-level performance monitoring.
- Top-performing campaigns substantially outperform portfolio averages — creating opportunities for strategy replication and scaling.

8. Recommendations

8.1 Quick Wins (This Quarter)

- **Budget Reallocation**: Increase investment in Event and Influencer campaigns due to superior profitability and conversion performance.
- **Email Scaling Strategy**: Expand Email campaign reach while preserving target quality.
- **Top Campaign Replication**: Replicate creative assets, audience segments, and timing strategies from Top 10 ROI campaigns.
- **Social Conversion Optimization:** Improve landing pages and call-to-action design to convert engagement into revenue more effectively.

8.2 Long-Term Strategies (Next 2-4 Quarters)

- **Campaign Duration Framework:** Adopt 8–15 day campaigns as the default structure.
- **Influencer Portfolio Expansion:** Diversify creator partnerships to reduce channel concentration risk.
- **Marketing Attribution Enhancement:** Implement multi-touch attribution to better understand customer journeys.
- **Seasonal Marketing Calendar:** Develop dedicated campaigns around Wedding Season, Raksha Bandhan, Navratri, Dussehra, Diwali, Christmas, and New Year

8.3 Marketing Budget Allocation Framework

Channel	Recommended Allocation
Influncer	35%
Event	30%
Social Media	20%
Email	15

Rationale:

- Influencer campaigns maximize acquisition.
- Event campaigns maximize profitability.
- Social Media supports awareness and engagement.
- Email provides cost-efficient conversion opportunities.

9. Constraints & Assumptions

Constraint / Assumption	Implication for Analysis
Data covers 12 months only	Cannot accurately track long-term multi-year seasonality or macro trends effectively.
Likes/Shares unavailable	Engagement measured using Clicks, Impressions and CTR
Synthetic campaign dataset	Extreme ROI values may exceed real-world benchmarks
External market factors excluded	Competitor actions and macroeconomic effects not considered
Store lease costs excluded	Analysis focuses strictly on gross product margin, not net operating profit per store.
